

Fiber Tweezer™

Cleaning of optical fibers

Applications

- Tweezer for preparing optical fibers for splicing
- Universal locking mechanism
- Cleaning sticks or cotton swabs
- Ergonomic design

Description

Fiber Tweezer is specially developed for cleaning raw fiber when you make fusion splicing and connector termination.

The tweezers flexible holders can be used together with cleaning swabs or clinical swabs. The ergonomic design ensures a good grip on the tweezers and is designed so the active cleaning area doesn't make physical contact with the worktable when put aside.
